Nevertheless, you need to understand what a camera does and how it captures photos and helps you to create the best picture possible, in the conditions that you may be in. Most digital cameras are now DSLRs, which stand for digital single-lens reflex. DSLRs have a larger sensor than, say, a compact digital camera. The higher resolution enables more detail and better quality in the image. High-end DSLRs are often used for studio work, although many are also used in consumer markets, such as photography and video. The major features you can expect to see in a DSLR include the following: Ability to shoot in high-resolution modes: Most high-end cameras are capable of capturing photos in many more resolutions than previous cameras can manage, enabling you to crop the image in such a way as to create a more artistic image. Ability to shoot in RAW format: This format captures the full details of the image. For example, on an 8.4-megapixel camera, you may be able to capture  $3840 \times 2160$  pixels of data for each color. The RAW format enables you to work with the data and bring out the best in the images. RAW can be edited in Adobe Lightroom 4, and even Lightroom 5. Ability to zoom: The amount of zoom that a camera can offer is also increasing. For example, 8.4-megapixel cameras might offer a 10x zoom, and 10-megapixel cameras can offer a 20x zoom. This zoom ability is a major benefit. Ability to adjust shutter speed and aperture: As you increase the shutter speed, objects appear to move. This is known as the shutter speed. The aperture

"So there we were, me, you, my asshole dad and the tyrant Brady, sitting in our living room back in 1999, watching the Super Bowl. I don't remember much, except that I was really nervous. It was the first time I'd seen him lose as a coach. I also remember his frustration with the officials. I remember him on the field talking to the refs, and I remember my dad saying, 'Calm down. You're an adult.' 'I'm an adult!' Brady's response. Then after the game, as we waited to see who the Patriots would play in the NFC Championship game, Brady and my dad were standing in the kitchen having a discussion.

Q: What is the difference between `$(document).ready()` and `$(function() { ... })` in JavaScript? I have been looking at some code that seems to use both `$(document).ready()` and `$(function() { ... })` on the same page. For example, the code for a shopping cart is: `$(document).ready(function() { $(' .addtocart').bind('click', function() { $(' .shopping-cart >.cart-collaterals').prepend($(this).closest('a').clone()); return false; }); });` and `$(function() { $(' .addtocart').bind('click', function() { $(' .shopping-cart >.cart-collaterals').prepend($(this).closest('a').clone()); return false; }); });`; Can someone explain what the difference is between `$(document).ready()` and `$(function() { ... })`? What do they do that is different? Thanks! A: `$(document).ready()` is the same as `$(function() { ... })` but is not a good idea to use it because this function can only used once. So you can use in the head of your document: `$(function() { $(' .addtocart').bind('click', function() { $(' .shopping-cart >.cart-collaterals').prepend($(this).closest('a').clone()); return false; }); });`; `$(function() { $(' .addtocart').bind('click', function() { $(' .shopping-cart >.cart-collaterals').prepend($(this).closest('a').clone()); return false; }); });`; Add to cart

## System Requirements:

You will need to download a copy of Homeworld and HL2 (even though you will probably install only one or the other). You will need two computers that will be able to run both games. You will need two monitors. We used two monitors for the demo but any two monitors with the same aspect ratio will work just fine. You will need a decent sound card. You don't need a crazy high-end card but do not use a card that is sound-card-only either. We used a Creative Sound Blaster Audigy
