. 1. From the pull down menu, select MESSAGE DIALOG. This menu is available when the state information is viewable in the field. If a field is  $\hat{\epsilon}\hat{\eta}\hat{\epsilon}\hat{\zeta}$  in the MESSAGE DIALOG field, the field information is reported only to the. The numeric message type value corresponds to the following Description When a tool or a method is defined as an action (operation, procedure or script), users can assign users to perform the tool or the method at a later date. The user will receive an email reminder when they are due to perform an action. Configure Configure action can be used to add users to an action. The user that is created by a user group will be added to the user group. A user that is defined as an

---

action administrator can also add users to action. Execute When a tool or a method is defined as an action, users can assign users to perform the tool or the method at a later date. The user will receive an email reminder when they are due to perform an action. Next, you can see the actions for the current user and for all of the users. The users are listed by their user group. By default, they are listed in alphabetical order by their username. You can re-order the users if they are defined in a custom order. To re-order the users, click the "REORDER USERS"™ button. Add or Edit User You can add or edit a user at this screen. You can edit the user and their user group by selecting the checkbox and typing the new username and the new user group. The users that are in the main user group cannot be deleted. You must delete the user group to delete a user. The new user name will be added to the user group. I didn't open my program to be able to save it if that is possible. No, there's no way to do that with a CRM. You can use your project manager to create a draft and then you can save it as a draft (but you can't save it as is). If you still have it open, you could export it

---

to Excel, that would allow you to save it if that's your preference. The PLC Logging software allows you to log data points to a CSV file. In a previous iteration
